

For when you need help with stroke, Parkinson's, MS and other neurological conditions

We understand that being diagnosed with a neurological condition can feel daunting - for you as the patient and for the people around you.

As well as assisting rehabilitation for patients recovering from neurological surgery, our teams help patients who have other medical neurological conditions.

Some people have conditions which come on suddenly, like an acquired brain injury or a spinal cord injury. Others experience intermittent and unpredictable conditions, like epilepsy, chronic fatigue syndrome (also known as myalgic encephalomyelitis, ME), or the early stages of multiple sclerosis.

Neurological conditions also include progressive illnesses, like motor neurone disease, Parkinson's disease or advanced multiple sclerosis. People also live with neurological conditions which have stabilised, like cerebral palsy or post-polio syndrome.

Effective rehabilitation and ongoing management of a condition can help improve quality of life and provide reassurance and knowledge for friends and families to help and support too.

Care after diagnosis or treatment

After being diagnosed with a stroke, multiple sclerosis, Parkinson's, motor neurone disease, or following a traumatic brain injury or surgery, rehabilitation support is vital for everyone involved.

With the challenge of family and friends often working full time, Circle Rehabilitation can help with round the clock care that includes up to three hours of therapy per day.

Our medically-led team brings together a range of specialists in different therapies; cognitive, physical and psychological. This means we can design a package of care based on your needs.

We have a wide range of the latest specialist rehabilitation equipment and access to MRI and CT scanners, which provide a backup for patients should you require any further treatment during your rehabilitation stay.

Our aims are:

- To provide the best health outcomes for you
- To give you and your family strategies for ongoing care
- To support you and your family in making adjustments

We will:

- Treat you as an individual, putting together a package of care that is tailored to you
- Support you towards achieving your goals

Circle Rehabilitation is the largest rehabilitation network in the UK, set in our specialist centre in Birmingham and in our Circle and BMI Healthcare hospitals across England, Scotland and Wales.

Although we are a large network, you will always be treated as an individual. Everyone is at a different point on their rehabilitation journey, and we will design a package of care with you that suits your individual needs. Our expert medical team includes consultants, doctors, nurses, psychologists, physiotherapists, dietitians and other specialist rehabilitation therapists. They'll provide you with the latest treatment and therapies utilising state-of-the-art technology, in a high quality hospital setting.

You set the goals; we work towards them together.

Funding your rehabilitation treatment

Do you have private medical insurance? Circle Rehabilitation is recognised by many of the major insurance and medical legal providers. Alternatively, you can pay for your own treatment. If you would like more information about using your private medical insurance, or if you would like to discuss prices for your individualised package of care, please call us on [0800 096 3236](tel:0800 096 3236) or email rehab@circlehealth.co.uk

We welcome referrals from GPs, consultants, insurers, solicitors and directly from patients. We can provide assistance to individuals, embassies and overseas patients on admissions, and we welcome enquiries from patients and their families to determine the most appropriate care we can offer.
